

City of Edgerton

Consumer Confidence Water Report – 2014

Covering Calendar Year – 2013

This brochure is a snapshot of the quality of the water that we provided last year. Included are the details about where your water comes from, what it contains, and how it compares to Environmental Protection Agency (EPA) and state standards. We are committed to providing you with information because informed customers are our best allies. It is important that customers be aware of the efforts that are made continually to improve their water systems. To learn more about your drinking water, please attend any of the regularly scheduled City Council meetings which are held the second and fourth Thursdays of the month at 7:00 PM at Edgerton City Hall.

For more information please contact
Beth Linn at 913.893.6231

404 East Nelson
Edgerton, KS 66021
P: 913.893.6231
EDGERTONKS.ORG/water

Our drinking water is supplied from several other water systems through a Consecutive Connection (CC).

Your water comes from :

Buyer Name	Seller Name
City of Edgerton	Johnson County RWD 7
City of Edgerton	City of Baldwin City
City of Baldwin City	City of Lawrence
Johnson County RWD 7	City of Olathe
Johnson County RWD 7	Miami County RWD 2
City of Olathe	Johnson County RWD 6C
City of Olathe	Water District 1 of Johnson County

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the **Safe Drinking Water Hotline (800-426-4791)**.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the **EPA's Safe Drinking Water Hotline (800-426-4791)**.

The sources of drinking water (both tap water and bottled water) included rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Containments that may be present in sources water before we treat it include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides, which may come from a variety of sources such as storm water run-off, agriculture, and residential users.

Radioactive contaminants, which can be naturally occurring or the result of mining activity.

Organic contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also come from gas stations, urban storm water run-off, and septic systems.

In order to ensure that tap water is safe to drink, EPA prescribes regulation which limits the amount of certain contaminants in water provided by public water systems. We treat our water according to EPA's regulations. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Our water system is required to test a minimum of 2 samples per month in accordance with the Total Coliform Rule for microbiological contaminants. Coliform bacteria are usually harmless, but their presence in water can be an indication of disease-causing bacteria. When coliform bacteria are found, special follow-up tests are done to determine if harmful bacteria are present in the water supply. If this limit is exceeded, the water supplier must notify the public.

Water Quality Data

The tables inside this brochure list all of the drinking water contaminants which were detected during the 2013 calendar year. The presence of these contaminants does not necessarily indicate the water poses a health risk. Unless noted, that data presented in this table is from the testing done January 1 – December 31, 2013. The State requires the City to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old. **The bottom line is that the water that is provided to you is safe.**

Terms and Abbreviations

Maximum Contaminant Level Goal (MCLG): the "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLGs allow for a margin of safety

Maximum Contaminant Level (MCL): the "Maximum Allowed" MCL is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology

Secondary Maximum Contaminant Level (SMCL): recommended level for a contaminant that is not regulated and has no MCL

Action Level (AL): the concentration of a contaminant that, if exceeded, triggers treatment or other requirements

Treatment Technique (TT): a required process intended to reduce levels of a contaminant in drinking water

Maximum Residual Disinfectant Level (MRDL): the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants

Non-Detects (ND): lab analysis indicates that the contaminant is not present

Parts per Million (ppm): or milligrams per liter (mg/l)

Parts per Billion (ppb): or micrograms per liter (µg/l)

Picocuries per Liter (pCi/L): a measure of the radioactivity in water

Millirems per Year (mrem/yr): measure of radiation absorbed by the body

Monitoring Period Average (MPA): An average of sample results obtained during a defined time frame, common examples of monitoring periods are monthly, quarterly and yearly.

Nephelometric Turbidity Unit (NTU): a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person. Turbidity is not regulated for groundwater systems.

Running Annual Average (RAA): an average of sample results obtained over the most current 12 months and used to determine compliance with MCLs

Microbiological	Results	MCL	MCLG	Typical Source
-----------------	---------	-----	------	----------------

No Detected Results were Found in the Calendar Year of 2013

Testing results for: City of Edgerton

Disinfection By products	Monitoring Period	Your Highest RAA	Range (low/high)	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	2013	10	5.1 - 16	ppb	60	0	By-product of drinking water disinfection
TOTAL TRIHALOMETHANES (TTHMs)	2013	60	46 - 73	ppb	80	0	By-product of drinking water chlorination

Lead and Copper	Monitoring Period	90th Percentile	Range (low/high)	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2011 - 2013	0.25	0.045 - 0.4	ppm	1.3	0	Corrosion of household plumbing
LEAD	2011 - 2013	3.2	1.1 - 4.6	ppb	15	0	

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

During the 2013 calendar year, we had no violation(s) of drinking water regulations.

Some or all of our drinking water is supplied from another water system. The table below lists all of the drinking water contaminants, which were detected during the 2013 calendar year from the water systems from which we purchase drinking water.

Regulated Contaminants	Collection Date	Water System	Your Highest Value	Range (low/high)	Unit	MCL	MCLG	Typical Source
ARSENIC	2/13/2013	City of Lawrence	2.4	1.3 - 2.4	ppb	10	0	Erosion of natural deposits
ATRAZINE	6/10/2013	City of Olathe	1.6	1.6	ppb	3	3	Runoff from herbicide used on row crops
BARIUM	2/13/2013	City of Lawrence	0.12	0.027 - 0.12	ppm	2	2	Discharge from metal refineries
CHROMIUM	3/5/2013	Water District 1 of Johnson County	2.9	2.6 - 2.9	ppb	100	100	Discharge from steel and pulp mills
CYANIDE	5/1/2013	Water District 1 of Johnson County	30	30	ppb	200	200	Discharge from steel/metal factories; Discharge from plastic and fertilizer factories
FLUORIDE	1/24/2013	City of Olathe	0.82	0.59 - 0.82	ppm	4	4	Natural deposits; Water additive which promotes strong teeth
NITRATE	6/4/2013	Water District 1 of Johnson County	1.9	0.2 - 1.9	ppm	10	10	Runoff from fertilizer use
NITRATE-NITRITE	5/1/2013	Water District 1 of Johnson County	1.3	0.2 - 1.3	ppm	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
SELENIUM	3/5/2013	Water District 1 of Johnson County	2.6	1.9 - 2.6	ppb	50	50	Erosion of natural deposits

Secondary Contaminants	Collection Date	Water System	Your Highest Value	Range (low/high)	Unit	SMCL
ALKALINITY, TOTAL	11/13/2013	City of Lawrence	7607	50.6 - 7607	MG/L	300
ALUMINUM	2/13/2013	City of Lawrence	0.06	0.0066 - 0.06	MG/L	0.05
BROMATE	2/15/2012	City of Lawrence	1.1	1.1	ppb	10
BROMIDE	8/14/2013	City of Lawrence	0.23	0.018 - 0.23	MG/L	0.05
CALCIUM	11/13/2013	City of Lawrence	46	30 - 46	MG/L	200
CARBON, DISSOLVED ORGANIC (DOC)	1/1/2009	City of Lawrence	3.9	2.1 - 3.9	MG/L	
CHLORATE	2/15/2012	City of Lawrence	100	46 - 100	UG/L	
CHLORIDE	3/5/2013	Water District 1 of Johnson County	170	27 - 170	MG/L	250
CHROMIUM, HEX	11/16/2011	City of Lawrence	0.1	0.03 - 0.1	UG/L	
CONDUCTIVITY @ 25 C UMHOS/CM	3/5/2013	Water District 1 of Johnson County	940	470 - 940	UMHO/CM	1500
CORROSIVITY	5/14/2013	Water District 1 of Johnson County	1.1	0.88 - 1.1	LANG	0
HARDNESS, CALCIUM MAGNESIUM	2/9/2011	City of Lawrence	40	38 - 40	MG/L	
HARDNESS, TOTAL (AS CaCO3)	5/8/2013	City of Lawrence	160	100 - 160	MG/L	400
IRON	5/21/2013	City of Olathe	0.021	0.021	MG/L	0.3
MAGNESIUM	2/13/2013	City of Lawrence	17	3.7 - 17	MG/L	150
METOLACHLOR	6/10/2013	City of Olathe	1.2	1.2	ppb	
NICKEL	2/13/2013	City of Lawrence	0.0021	0.0012 - 0.0021	MG/L	0.1
ORTHOPHOSPHATE	2/13/2013	City of Lawrence	0.1	0.05 - 0.1	MG/L	
PERCHLORATE	2/15/2012	City of Lawrence	0.16	0.16	UG/L	
PH	5/14/2013	Water District 1 of Johnson County	9.6	9.3 - 9.6	PH	8.5
PHOSPHATE, TOTAL	8/19/2009	City of Lawrence	0.09	0.05 - 0.09	MG/L	
PHOSPHORUS, TOTAL	8/14/2013	City of Lawrence	0.18	0.065 - 0.18	MG/L	5
POTASSIUM	7/8/2013	Water District 1 of Johnson County	9.6	5.5 - 9.6	MG/L	100
SILICA	8/14/2013	City of Lawrence	12	0.64 - 12	MG/L	50
SODIUM	3/5/2013	Water District 1 of Johnson County	130	38.1 - 130	MG/L	100
SULFATE	3/5/2013	Water District 1 of Johnson County	160	63.6 - 160	MG/L	250
SUVA (SPECIFIC ULTRAVIOLET ABSORBANCE)	7/1/2009	City of Lawrence	3.1	2.1 - 3.1	L/MG-M	
TDS	3/5/2013	Water District 1 of Johnson County	520	270 - 520	MG/L	500
UV ABSORBANCE @254 NM	2/9/2011	City of Lawrence	0.074	0.068 - 0.074	CM-1	
ZINC	5/14/2013	Water District 1 of Johnson County	0.014	0.0067 - 0.014	MG/L	5

During the 2013 calendar year, the water systems that we purchase water from had no violation(s) of drinking water regulations.

Please Note: Because of sampling schedules, results may be older than 1 year.
